POLITEKNIK NEGERI MADIUN

TAHUN AJARAN 2026/207

Langkah-langkah Penggunaan Framework Bootstrap

1. Menambahkan Bootstrap
   Terdapat dua cara untuk menambahkan bootstrap yaitu:
   A. Menambahkan Bootstrap via CDN
   Metode ini merupakan cara yang paling mudah dan cepat karena kamu tidak perlu mengunduh file Bootstrap secara manual. Kamu hanya perlu menambahkan link CSS Bootstrap ke dalam bagian <head> dan script JavaScript sebelum penutup tag </body>. Dengan cara ini, file Bootstrap akan diambil langsung dari server internet sehingga website kamu bisa langsung menggunakan berbagai fitur dan komponen Bootstrap.
   Contoh:

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Home - Tutorial CSS Framework</title>
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css" rel="stylesheet">
</head>
```

```html
</div>
<footer class="bg-dark text-white text-center p-3 mt-5">&copy; 2026 Tutorial CSS Framework | Nama: Rhenanda Nayla Putri | NIM: 253307037</footer>
<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/js/bootstrap.bundle.min.js"></script>
</body>
</html>
```

   B. Cara Alternatif (Download Manual)
   Cara ini dilakukan dengan mengunduh (download) file Bootstrap secara manual lalu menyimpannya di dalam folder project. Setelah itu, file CSS dan JavaScript Bootstrap dihubungkan ke file HTML menggunakan tag <link> dan <script> dengan path lokal.
   Contoh:

```html
<link rel="stylesheet" href="css/bootstrap.min.css">
<script src="js/bootstrap.bundle.min.js"></script>
```

2. Menggunakan Bootstrap
   A. Grid System
   Grid system pada Bootstrap digunakan untuk mengatur layout atau tata letak halaman agar rapi dan responsif. Sistem ini terdiri dari tiga bagian utama yaitu container sebagai pembungkus, row sebagai baris, dan col sebagai kolom. Dengan menggunakan grid Bootstrap, mampu menyesuaikan tampilan di berbagai ukuran layar, seperti HP, tablet, maupun desktop, sehingga website tetap terlihat rapi di semua perangkat.
   Contoh:

```html
<div class="container">
  <div class="row">
    <div class="col-md-4 mb-3"><div class="card bg-primary text-white p-3">Column 1</div></div>
    <div class="col-md-4 mb-3"><div class="card bg-success text-white p-3">Column 2</div></div>
    <div class="col-md-4 mb-3"><div class="card bg-warning text-dark p-3">Column 3</div></div>
  </div>
</div>
```

   B. Navbar
   Navbar adalah komponen navigasi yang biasanya berada di bagian atas website. Navbar digunakan untuk menampilkan menu seperti Home, About, Contact, dan

lain-lain. Dengan menggunakan class seperti navbar, navbar-expand-lg, dan navbar-light, kamu bisa membuat navigasi yang menarik tanpa harus mendesain dari awal.

Contoh:

```
<body>
  <nav class="navbar navbar-expand-lg navbar-light bg-light">
    <a class="navbar-brand" href="#">My Website</a>
    <div class="collapse navbar-collapse">
      <ul class="navbar-nav me-auto">
```

C. Button

Button pada Bootstrap digunakan untuk membuat tombol dengan berbagai gaya dan warna. Kamu cukup menambahkan class seperti btn dan variasinya seperti btn-primary, btn-success, atau btn-danger.

Contoh:

```
    </div>
    <button type="submit" class="btn btn-primary">Submit</button>
  </form>
```

D. Card

Digunakan untuk menampilkan konten dalam bentuk kotak, seperti informasi produk, artikel, atau profil. Card biasanya terdiri dari gambar, judul, deskripsi, dan tombol. Dengan menggunakan class seperti card, card-body, dan card-title, kamu bisa membuat tampilan konten yang rapi dan terstruktur.

Contoh:

```
div class="container">
 <div class="row">
   <div class="col-md-3 mb-3"><div class="card p-3">Project 1</div></div>
   <div class="col-md-3 mb-3"><div class="card p-3">Project 2</div></div>
   <div class="col-md-3 mb-3"><div class="card p-3">Project 3</div></div>
   <div class="col-md-3 mb-3"><div class="card p-3">Project 4</div></div>
 </div>
```

E. Table

Table digunakan untuk menampilkan data dalam bentuk tabel. Bootstrap menyediakan styling tabel yang lebih menarik dibandingkan HTML biasa. Kamu cukup menambahkan class seperti table, table-striped, atau table-bordered untuk mempercantik tampilan table.

Contoh:

```
<table class="table table-striped table-hover table-bordered">
<thead class="table-dark">
<tr><th>Kolom 1</th><th>Kolom 2</th></tr>
</thead>

<tbody>
<tr><td>Data 1</td><td>Data 2</td></tr>
</tbody>
</table>
```

F. Form

Form pada Bootstrap digunakan untuk membuat input data dari pengguna, seperti login, registrasi, atau pengisian data.

Contoh:

```html
<form>
  <div class="mb-3">
    <label for="name" class="form-label">Nama</label>
    <input type="text" class="form-control" id="name" required>
  </div>
  <div class="mb-3">
    <label for="email" class="form-label">Email</label>
    <input type="email" class="form-control" id="email" required>
  </div>
  <div class="mb-3">
    <label for="message" class="form-label">Message</label>
    <textarea class="form-control" id="message" rows="4" required></textarea>
  </div>
  <button type="submit" class="btn btn-primary">Submit</button>
</form>
```

3. Kode Program

A. Home

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Home - Tutorial CSS Framework</title>
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css" rel="stylesheet">
</head>
<body>
  <nav class="navbar navbar-expand-lg navbar-light bg-light">
    <a class="navbar-brand" href="#">My Website</a>
    <div class="collapse navbar-collapse">
      <ul class="navbar-nav me-auto">
        <li class="nav-item"><a class="nav-link active" href="home.html">Home</a></li>
        <li class="nav-item"><a class="nav-link" href="about.html">About</a></li>
        <li class="nav-item"><a class="nav-link" href="services.html">Services</a></li>
        <li class="nav-item"><a class="nav-link" href="portfolio.html">Portfolio</a></li>
        <li class="nav-item"><a class="nav-link" href="contact.html">Contact</a></li>
      </ul>
    </div>
  </nav>
  <header class="container text-center my-5">
    <h1 class="display-4">Welcome to My Bootstrap Website</h1>
    <p class="lead">Tutorial CSS Framework dengan Bootstrap</p>
    <p> Nama: Rhenanda Nayla Putri | NIM: 253307037</p>
  </header>
  <div class="container">
    <div class="row">
      <div class="col-md-4 mb-3"><div class="card bg-primary text-white p-3">Column 1</div></div>
      <div class="col-md-4 mb-3"><div class="card bg-success text-white p-3">Column 2</div></div>
      <div class="col-md-4 mb-3"><div class="card bg-warning text-dark p-3">Column 3</div></div>
    </div>
  </div>
  <footer class="bg-dark text-white text-center p-3 mt-5">&copy; 2026 Tutorial CSS Framework | Nama: Rhenanda Nayla Putri | NIM: 253307037</footer>
  <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/js/bootstrap.bundle.min.js"></script>
</body>
</html>
```

B. Service

services.html

MODUL 6 > services.html > html > body > header.container.text-center.my-5 > p.lead

```html
<!DOCTYPE html>
